

Kaput[®]

FERAL HOG LURE

NET WT. 50 LBS (22.7 KG)

Kaput Feral Hog Lure

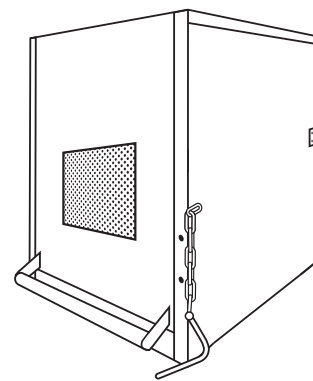

designed for optimum conditioning results prior to the use of **Kaput Feral Hog Bait** and as an attractant for hog trapping

Kaput Feral Hog Bait is used to control feral hogs (*Sus Scrofa*) on pastures, rangeland, forests, non-crop areas, and crop lands. It may only be applied in hog feeders equipped with heavy lids (8 - 10 lbs of total weight) on bait compartments so as to limit direct access to bait by non-target animals. Prior to the use of **Kaput Feral Hog Bait**, feral hogs must be conditioned (trained) to accept feed from the bait dispensers and to open the weighted lids to bait compartments.

SELECTION OF FEEDER SITES: Feeder sites must be consistent with the limitations set forth in the USE RESTRICTIONS on the **Kaput Feral Hog Bait** label. **Feeders must remain in the selected location throughout the conditioning and baiting periods.**

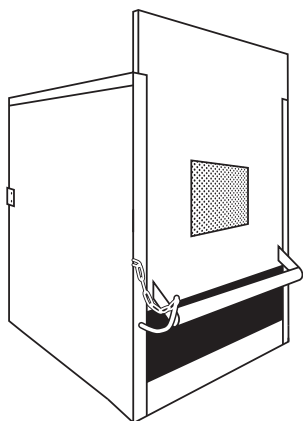

Before beginning the conditioning and baiting process, observe the area selected for treatment to identify where hog activity and trails are located. Look for evidence of recent activity, including hog sightings, hog damage to crops, rooting of the soil, hog wallows, and fresh hog tracks and fecal material.

PLACING AND SECURING HOG FEEDERS: Place hog feeders in or near probable resting areas for hogs, including brush along streams, dense cover, and tall vegetation. Do not place feeders in open areas in crops, fields, or pastures. From one to three bait feeders may be used per placement location, according to the apparent number of hogs visiting the location. Three dispensers spaced no more than 10 feet apart may be used where hog numbers are excessive (e.g., if large hog family groups, or sounders, are present). Secure feeders in place, so that hogs cannot tip them over, by use of T-posts or by tying the feeders to trees or shrubs.

CONDITIONING: Load the feeding compartments with **Kaput Feral Hog Lure**, and open the lids to the feeding compartments by about 6 inches so that hogs can access this feed with little difficulty. Load 25 to 50 lbs. of the non-toxic feed into each hog feeder. Provide access to non-toxic feed for three to six weeks, refilling as needed, until hogs are feeding readily from the bait compartments. **Failure to condition hogs to feeders or ending the conditioning period too early may reduce the number of hogs taken or prolong the period of time needed for toxic baiting.**

TRAPPING: to use as a hog attractant for trapping, place trap in an area of recent hog activity (see above), in or near probable resting areas for hogs. Place 10-25 lbs of **Kaput Feral Hog Lure** in each trap. Refill as needed.

ATTENTION: Feeding and baiting wildlife is prohibited or restricted in some places. Before using this product, be sure to check all relevant federal, state, and local regulations. **NOT FOR HUMAN CONSUMPTION.**

WARRANTY: To the extent consistent with applicable law, Manufacturer and Seller make no warranty, express or implied, concerning the use of this product other than indicated on the label. Buyer assumes all risk of use and/or handling of this material when such use/handling is contrary to label instructions.

INGREDIENTS: Corn, Natural and Artificial Flavors.
